This book is dedicated to Bernard Gitton, French physicist-turned-artist. Gitton's towering water clocks are found in major cities around the world and are the only water clocks to use a pendulum in their design. One of Gitton's clocks stands as the centerpiece in The Children's Museum of Indianapolis' Welcome Center. It is a constant reminder to all visitors that "time flows." It was made possible through a contribution by Mr. and Mrs. Richard D. Wood.

Be sure to browse through pages 33 and 34 for special insights into the artifacts included in this book.
Big clocks run by water power.
Clocks to wake you
Clocks that run with pendulums
"I wonder what kind of clock that mouse ran up in the Mother Goose rhyme?"

Clocks that chime a hymn to hum.
