Concerning Dislocations of Joints.

If you have never a Ladder, you may use a piece of Wood, laid across upon two Poles. Also you may use a door, as the other figure sheweth, wherein you must believe a piece of wood or board with strong thongs, which are all contained in the following Chapter.

CHAPTER XXVII. The same manner of reducing a dislocated Arm.

As it is written, that this is the best way of all to reduce a dislocated shoulder. You must take a good long board, as forego or dry fingers breadth, and some two fingers thickness on both sides, but not wider or thereupon hose, the one end thereof must be narrow and thin, with a round head, standing up, and lightly bulbooned, that put under the arm, it may relieve part of the head of the shoulder bone, which for that purpose is intended towards this side, but to the top of the shoulder. This upper part of the board must be wrapped about with a linen or clockerring, or some other thing that stick not with the skin, and then it must be fastened under the arm, that it may thoroughly penetrate into the inner part between the ribs, and the head of the shoulder bone. Then take, beside this board, two holes in three several places, each hole distant from the other, though which forego and thing be put, whereby it may be so fastened to the arm, stretched at the length thereof even to the fingers, in one place a little below the head of the shoulder bone, in another
