CHRISTMAS: AN AMERICAN ANNUAL  
OF CHRISTMAS LITERATURE AND ART., Vol. 35,  
copyright ©1965, Augsburg Publishing House.

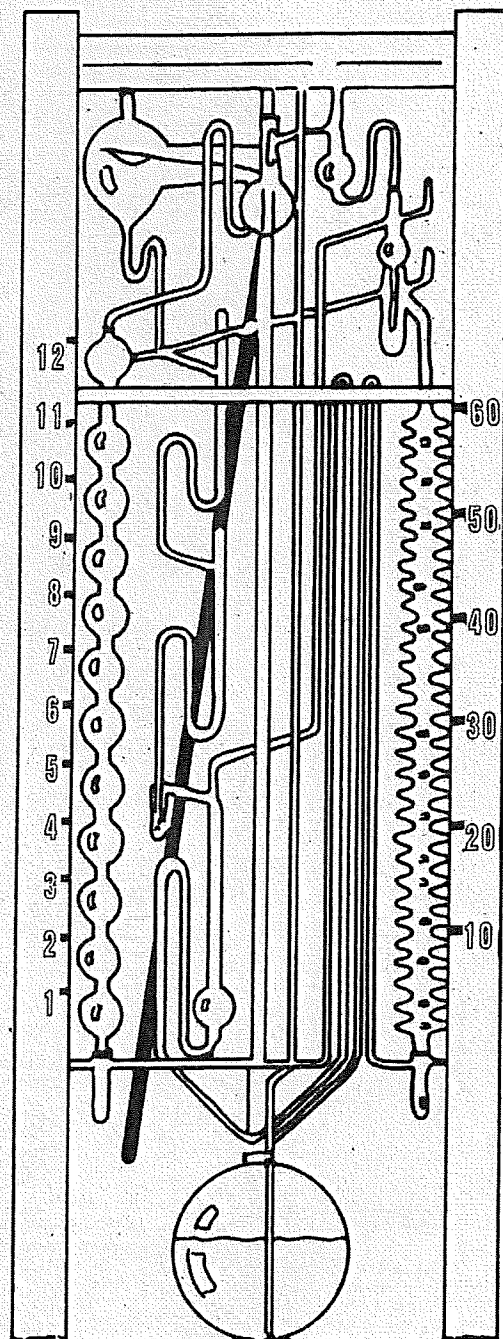

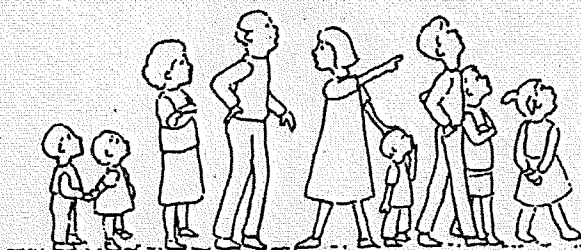

This book is dedicated to Bernard Gitton, French physicist-turned-artist. Gitton's towering water clocks are found in major cities around the world and are the only water clocks to use a pendulum in their design. One of Gitton's clocks stands as the centerpiece in The Children's Museum of Indianapolis' Welcome Center. It is a constant reminder to all visitors that "time flows." It was made possible through a contribution by Mr. and Mrs. Richard D. Wood.

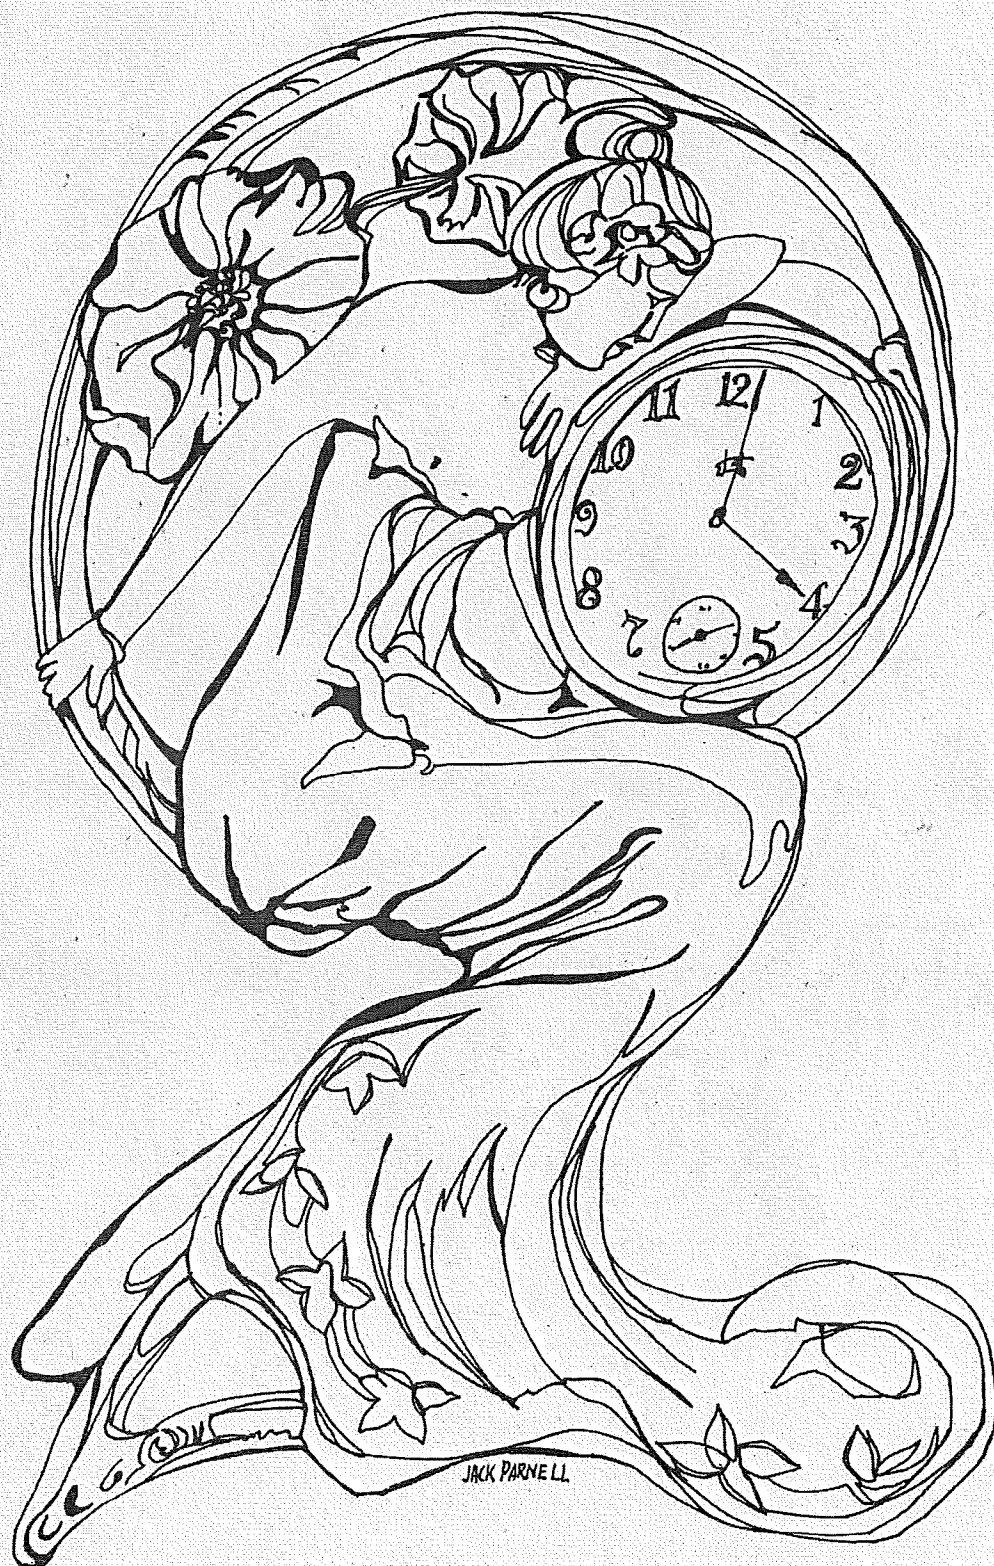

Be sure to browse through pages 33 and 34 for special insights into the artifacts included in this book.

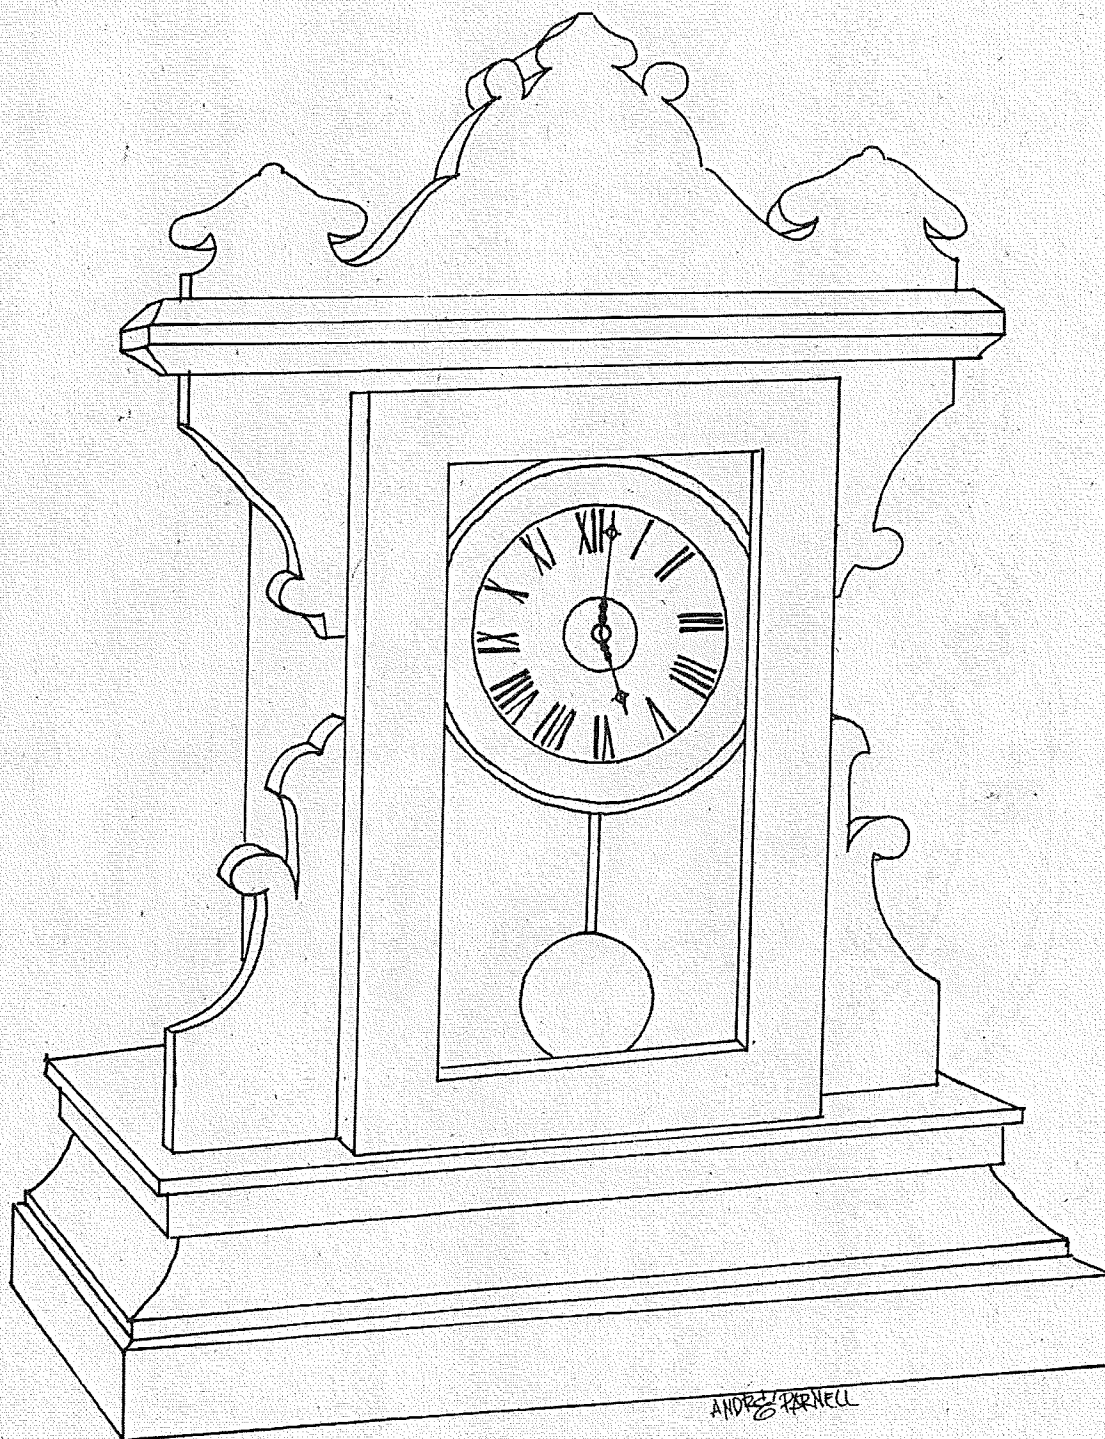

Big clocks  
run by  
water power.

Clocks to wake you

Clocks that run with pendulums

"I wonder what  
kind of clock  
that mouse  
ran up, in the  
Mother Goose  
rhyme?"

Clocks  
that chime  
a hymn to hum.
